CSCSL	Confirmed and Suspected Contaminated Sites List
EDR	Environmental Data Resources Inc.
HOV	high-occupancy vehicle
I-5	Interstate 5
LUST	Leaking Underground Storage Tank
NEPA	National Environmental Policy Act
NFA	No Further Action
ROW	right-of-way
SR 99	Pacific Highway S
The project	City Center Access Project
USTs	underground storage tanks
WSDOT	Washington Department of Transportation

1. Introduction

1.1 Project Purpose and Description

This Hazardous Materials Discipline Report was prepared for the City of Federal Way to document the hazardous materials impacts associated with the City Center Access Project (the project). The project would provide improved multimodal mobility and access for regional and local trips while protecting the interstate system by providing congestion relief along S 320th Street and expanded multimodal facilities across Interstate 5 (I-5). The project would consist of the following elements:

- Building an I-5 overcrossing at S 324th Street from 23rd Avenue S to Weyerhaeuser Way S for people to walk, bike, or drive.
- Making road improvements on S 324th Street from Pacific Highway S (SR 99) to 23rd Avenue S.
- Modifying the S 320th Street interchange.
- Adding access to I-5 at S 324th Street with roundabouts at freeway on- and off-ramps.
- Building two new roundabouts on S 324th St: at 23rd Avenue S and Weyerhaeuser Way S.
- Providing high-occupancy vehicle (HOV) lanes on S 320th Street from SR 99 to Military Road S.
- Adding shared-used paths and regional trail connections, including a potential connection to the BPA Trail.
- Stream crossing upgrades to improve fish passage, including corrections to four culverts.

The City of Federal Way initiated the City Center Access Project to determine what transportation system changes are needed to preserve future mobility in the City Center. The Federal Way City Center Core is designated as one of 29 regional growth centers identified in the Puget Sound Regional Council's Vision 2040. The purpose of the Federal Way City Center Access project is to improve the economic vitality of the City Center and to improve the quality of life for people who work, play, and live in the City by increasing multimodal mobility and access to regional and local trips while protecting the integrity of the interstate system. Access and mobility are limited by congestion issues along S 320th Street between Pacific Highway S and Military Road, including to and from I-5, and by the lack of multimodal facilities across I-5.

The project area is defined as the limits of anticipated construction, acquired property and right-of-way (ROW), and temporary constructions easements. The project area is shown on Figure 1. The study area for this discipline was defined as the project area plus the standard search distances for environmental databases as defined in the American Society for Testing and Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E 1527-21)* (ASTM 2021).

Acquired property is expected along existing ROW, adjacent to I-5 to the west along Winged Foot Way and Oakland Hills Boulevard in the Belmor Park Manufactured Home Community (to accommodate a fish passable culvert), and immediately adjacent to I-5 to the east across from the Belmor acquisition (to accommodate the extension of S 324th Street across I-5 to Weyerhaeuser Way).

Excavation associated with project activities is expected to include grading for ROW expansion and ramp construction, utility installation and relocation, and bridge construction.

1.2 Preferred Alternative

The S 324th Street Interchange Alternative 2I (Grade Separated Ramps + Roundabouts at S 324th Street) was identified as the alternative that best meets the Purpose and Need of the project. Alternative 2I was recommended to the Federal Way City Council in November 2019 based on the results of alternatives analysis screening. The City Council agreed to move forward with Alternative 2I. The anticipated project elements and phasing are summarized in Table 1-1 and Figure 1-2 shows the locations of the phasing.

Table 1-1. Anticipated Project Phasing

	Local Street Improvements and Connections	Ramp and Interchange Improvements
Phase 1	- Construct new S 324th Street between 23rd Avenue S and I-5 southbound ramp intersections. - Widen S 324th Street between SR 99 and 23rd Avenue S. - Improve S 324th Street and SR 99 intersection with added turn lanes. - Improve fish passage.	- Construct/revise I-5 southbound off-ramps to S 320th Street and S 324th Street. - Construct/revise on-ramps from S 320th Street and S 324th Street to I-5 southbound.
Phase 2	Construct new S 324th Street from I-5 southbound ramp intersection to Weyerhaeuser Way S, including S 324th Street bridge and Weyerhaeuser Way S intersection.	- Construct/revise I-5 northbound off ramp to S 324th Street. - Construct/revise portion of I-5 northbound off ramp to S 320th Street.
Phase 3A	- Replace S 320th Street bridge over I-5. - Widen S 320th Street from I-5 southbound ramp intersection to Military Road S. - Restripe S 320th Street to provide high-occupancy vehicle lanes from SR 99 to southbound ramp intersection. - Improve fish passage.	- Reconstruct S 320th Street loop ramp to I-5 northbound. - Construct/revise the remaining portion of I-5 northbound off ramp to S 320th Street.
Phase 3B	Make local improvements associated with this project are substantially complete.	- Realign the I-5 northbound on ramp from S 320th Street. - Construct the I-5 northbound on ramp from S 324th Street.

Figure 1-2. Federal Way City Center Access Project – Phase 1

1.3 Methodology

The purpose of this report is to evaluate the potential for encountering hazardous materials or petroleum hydrocarbons as a result of project activities in compliance with the National Environmental Policy Act (NEPA).

This report was prepared in accordance with Chapter 447 of the Washington Department of Transportation (WSDOT) Environmental Procedures Manual which is consistent with ASTM guidelines and the WSDOT Guidance and Standard Methodology for Hazardous Materials Discipline Reports (WSDOT 2017).

1.3.1 Regulatory Database Review

Pertinent state and federal regulatory database information was procured from Environmental Data Resources Inc. (EDR). The complete EDR database report is included in Appendix A. Due to the anticipated limited ground disturbance involved in the project, only sites with releases within 0.25 mile (state databases) of the project area were evaluated.

A comprehensive list of regulatory databases reviewed is contained in the EDR report (Appendix A).

1.3.2 Regulatory File Review

Some sites identified in the regulatory database review as having confirmed releases were further evaluated for pertinent details via the online Washington Department of Ecology (Ecology) Cleanup Site Search (Ecology 2021). This tool provides additional details of site conditions and regulatory status as well as electronic site documents where available.

1.3.3 Historical Review

The availability of historical aerial photographs and Sanborn Maps for the project area was evaluated. Sanborn maps for the project area were not available. Historical aerial photographs for the years 1942, 1961, 1974, 1991, 2005, and 2015 for the project area (included in Appendix B) were reviewed for indications of land use that might be associated with use or storage of hazardous materials or petroleum hydrocarbons.

In addition, the EDR report described above in Section 1.3.1 makes available proprietary databases derived from historical city directories containing data related to businesses related to auto repair and fueling as well as dry-cleaning, both of which are commonly related to soil and groundwater contamination. These proprietary historical databases have also been evaluated for the project area.

2. Affected Environment

2.1 Geology and Hydrogeology

The subsurface in the vicinity of the project area is known to include varying layers of surficial fill associated with development that ranges from 5 to 15 feet in thickness. The composition and compactness of the fill is unknown and is likely to be highly variable. Native soils beneath the fill consist of dense to very dense glacial sand and gravel outwash and glacial till. Groundwater in the vicinity of the project is assumed to range from approximately 5 to 15 feet below ground surface (Antea Group 2013).

2.2 Regulatory Database Review

The affected environment within the study area was assessed by reviewing the state and federal regulatory database records as described above. The identified sites were assigned to one of three risk categories based on the proximity to the study area, the type and number of databases in which the site was found, known releases of hazardous materials or petroleum products, and the status of remediation or cleanup efforts at sites with known releases. One of three risk categories was assigned to sites within the study area: high, medium, and low.

- **High Risk.** Sites that involve substantial contamination of large areas, including soil, groundwater, and multiple contaminants, and might represent higher risk of further releases of hazardous materials to human health or the environment; that would be likely to involve high levels of regulatory approvals or extensive or lengthy remediation activities that may create other impacts to the environment; or that could pose major delays to the development of the project.
- **Medium Risk.** Sites where the nature of potential contamination is known based on existing investigation data, the potential contaminants are not extremely toxic or difficult to treat, and probable remediation approaches are straightforward.
- **Low Risk.** Sites where the nature of potential contamination is known based on existing investigation data and the sites are not expected to have notable impacts on the project due to their location, or sites where hazardous materials were used but had no or only very small reported releases.

Twenty-three sites listed in state databases which indicate a confirmed release of a hazardous material or petroleum hydrocarbons are located within 0.25-mile of the project area. No sites associated with federal databases indicating a confirmed release were found within 1 mile of the project area.

Based on location, regulatory status, and/or the minor nature and extent of the release, 21 of the 23 sites are a low risk to impact the project area. The two remaining sites (locations shown on Figure 1) were determined to be in the medium risk category and are discussed below.

ARCO 5241 – 2202 S 320th Street

This site is listed in a number of state cleanup databases including the Leaking Underground Storage Tank (LUST) and the Confirmed and Suspected Contaminated Sites List (CSCSL) databases. This former gasoline station (no longer on the property) was confirmed to have leaked gasoline and associated compounds to soil and groundwater from underground storage tanks (USTs) and associated piping. The USTs and soil contamination were outside of the project area but gasoline in groundwater extended southwest from the site underneath S 320th Street. The most recent

groundwater monitoring data available (2015) indicated gasoline and associated compounds above cleanup levels immediately north of S 320th Street. Groundwater at the site may be as shallow as 5 to 8 feet below ground surface. It does not appear that full cleanup of the site has occurred at this time and the site is not currently in compliance with Ecology.

ARCO 6175 – 3910 S 320th Street

This site is listed in a number of state cleanup databases including LUST and CSCSL No Further Action (NFA) databases. This operating gasoline station had a confirmed release of gasoline and associated compounds to soil and groundwater. Based on a review of site information it appears that remediation efforts were successful, and the site received an NFA determination from Ecology in 2012. Despite the NFA designation, some residual soil contamination was detected in the vicinity of the pump island (within the project area) at a depth of approximately three feet. Gasoline concentrations were below site cleanup levels but may indicate some quantity of residual, low-level soil contamination within the project area.

2.3 Historical Review

2.3.1 Historical Aerial Photographs

Historical aerial photographs of the study area were obtained from publicly available sources. Aerial photographs were examined for the years 1942, 1961, 1974, 1991, 2005, and 2015. Observations are listed below.

- 1942: The majority of the project area is forested and undeveloped with a few rural residences along the existing S 320th Street.
- 1961: Development of I-5 has begun through the project area. The majority of the remaining project area is forested and undeveloped.
- 1974: I-5 has been completed and development in the project area has increased including the construction of the Belmor development.
- 1991-2015: Significant development has occurred in the project area including The Commons commercial area and the project area appears much as it does today.

No additional sites of environmental concern or evidence of adverse conditions associated with land use were identified through the historical aerial photograph review.

2.3.2 Sanborn Maps

Sanborn maps were not available for any period within the project area.

2.3.3 EDR Proprietary Databases

Nine sites identified in the EDR Historical Auto database were located either within or adjacent to the project area. All of these sites were either far enough outside the project area such that impacts to the project are not expected or associated with sites listed in the regulatory databases and reviewed during that process.

Three sites within the project area were listed in the EDR Historical Cleaners database. None of these sites were associated with a database that indicates a release to the subsurface. Inclusion in the EDR Historical Cleaners database alone does not warrant the site being noted as an environmental concern.

3. Potential Impacts

Many potential impacts and mitigation measures for hazardous materials are similar for all construction projects. This project involves relatively minor amounts of excavation to accommodate grading, utilities, and bridge construction. Construction impacts are considered short-term in comparison to the lifespan of the completed project and would end when construction is complete. Potential construction and environmental effects related to the project are discussed below.

3.1 Construction Impacts

The hazardous materials analysis also considered direct impacts of activities associated with the construction of the project. The analysis considered the impacts to human health and the environment as a result of possible release of contaminants or alteration of contaminant migration pathways during construction activities and considered the effects of existing contaminated sites.

Based on the developed nature of the project area there is the potential for unknown or unidentified contamination in the subsurface (soil or groundwater) to be encountered during project construction activities. Unanticipated contamination can put workers at risk and can cause delays and costs not accounted for in project schedule and budget.

No high-risk hazardous materials sites were identified during this analysis. The two medium-risk sites identified (former ARCO 5241 and current ARCO 6175 properties described above) have some potential for impacts on construction depending on the location of excavation associated with grading and utility placement.

Excavation in the ROW to the south and southwest of the former ARCO 5241 could potentially encounter residual gasoline contaminated groundwater at relatively shallow depths. If groundwater is not present in the shallow excavation expected for this area, there remains some potential (expected to be low to moderate) for vapors associated with residual gasoline contaminated groundwater to impact deeper excavations and workers in the vicinity.

If excavation is planned for the vicinity of the current pump islands at ARCO 6175, there is the potential to encounter residual, low-level gasoline contaminated soil which was left in place in compliance with Ecology approved site soil cleanup levels.

3.2 Long-term Impacts

There are no known long-term impacts associated with hazardous materials unique to the Federal Way City Center Access project.

4. Mitigation

Unexpected residual soil and groundwater contamination may be encountered during construction activities in portions of the build alternative site footprint. To mitigate potential impacts from all potential hazardous material sites, the City of Federal Way would perform a level of environmental due diligence appropriate to the size and presumed past use at any properties in the study area before they are acquired. The City of Federal Way may seek certain legal protections as part of the real property acquisition process to reduce its legal and financial risk.

If environmental concerns were identified through the initial due diligence process, or if a property being acquired has previously been identified as having releases of hazardous materials or existing contamination, the property may be subject to a subsurface investigation to determine the existence of and, if present, the nature and extent of contamination at the site. The City of Federal Way may be responsible for the remediation of any contaminated soil and groundwater on properties that it acquires, including that which would be previously unknown and found during construction. To the extent practicable, the City of Federal Way would also limit construction activities that might encounter contaminated groundwater or soil.

Based on the due diligence process, plans for the mitigation, handling, and disposal of contaminated media and hazardous construction debris would be developed on a site-by-site basis in conjunction with the appropriate regulatory agencies if determined to be necessary. A project-wide contaminated media management plan (CMMP) should also be developed and implemented and would be expected to cover the majority of minor encounters with contaminated soil or groundwater.

Mitigation related to the subsurface work to the south of the ARCO 5241 site would likely include work area air monitoring in excavations in the event that a gasoline odor is noted, and the collection of groundwater samples if groundwater is encountered in deeper excavations in this area. Air and water results would aid in determining proper personal protective equipment for workers and water disposal options if dewatering is required.

Excavation near the pump island at the ARCO 6175 site would likely require adhering to the project CMMP in order to properly characterize any potentially gasoline contaminated soil for disposal.

Additionally, hazardous substances and petroleum products used during construction, such as fuels, paints, solvents, and other chemicals, would be managed and stored per the contractor's pollution control plan. Best management practices (BMPs) would be followed in order to reduce the risk of spills, leaks, or other releases during construction activities. These BMPs could include:

- Fueling, maintenance, and cleaning in contained areas (berms, etc.)
- Minimization of the production or generation of hazardous materials
- Appropriate labeling and storage of hazardous waste per federal regulations
- Designated hazardous waste storage away from storm drains or surface water
- Recycling of materials (used oil- and water-based paint) as appropriate
- Handling any potential spills of hazardous materials in conformance with applicable Material Safety Data Sheets.

5. Conclusions

As described above, there are twenty-three sites with confirmed releases of hazardous materials or petroleum hydrocarbons to the subsurface within the study area. After evaluation, 21 of the 23 sites were determined to be of low risk to the project. The remaining two sites, both releases from former or current gas station infrastructure, were classified as medium risk to the project. Depending on precise excavation locations and depths determined during design, these two sites may require some amount of planning and mitigation to reduce risk to the project construction and project workers.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:							
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.							
Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

products may need to be sent out as hazardous waste. Target stores normally operate as a small quantity generator (SQG) as defined in 40 CFR 262.13. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These events may exceed 2.2 pounds in a single shipment.

Waste Stream Comments:

CORB Waste Sequence Number: 165006

Comments: When products are damaged or recalled, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.13. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3493218

Sequence Number: 1

Comments: Additional Waste Codes: U002, U154 When products are damaged or recalled, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.13. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3493219

Sequence Number: 1

Waste Stream Comments:

CORB Waste Sequence Number: 165006

Comments: When products are damaged or recalled, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.13. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3493218
Sequence Number: 1

Comments: Additional Waste Codes: U002, U154 When products are damaged or recalled, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.13. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3493219
Sequence Number: 1

Waste Stream Comments:

CORB Waste Sequence Number: 159368

Comments: When products are damaged, recalled or returned by a guest, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.34. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These episodic events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3419930

Sequence Number: 1

Comments: Additional Waste Codes: U002, U154. When products are damaged, recalled or returned by a guest, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.34. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These episodic events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3419931

Sequence Number: 1

Comments: When products are damaged, recalled or returned by a guest, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.34. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These episodic events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3419933

Sequence Number: 1

Comments: When products are damaged, recalled or returned by a guest, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.34. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These episodic events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3419934

Sequence Number: 1

Comments: When products are damaged, recalled or returned by a guest, these products may need to be sent out as hazardous waste. Target Stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.34. However, Target retails over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These episodic events may exceed 2.2 pounds in a single shipment.

Waste Sequence Number: 3419936

Form Comm: When products are damaged, recalled or returned by a guest, these products may need to be sent out as hazardous waste. Target stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.34. However, Target retails pharmaceuticals and over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These episodic events may exceed 2.2 pounds in a single shipment. In December 2015, Target sold all pharmacy operations to CVS Health. Target continues to retail OTC products that may continue to be considered P-listed waste.

Waste Stream Comments:

CORB Waste Sequence Number: 154925
Comments:

When products are damaged, recalled or returned by a guest, these products may need to be sent out as hazardous waste. Target stores normally operate as small quantity generators (SQG) as defined in 40 CFR 262.34. However, Target retails pharmaceuticals and over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These episodic events may exceed 2.2 pounds in a single shipment. In December 2015, Target sold all pharmacy operations to CVS Health. Target continues to retail OTC products that may continue to be considered P-listed waste.

Form Comm:

When products are damaged, recalled or returned by a guest, these products may need to be sent out as hazardous waste. Target stores normally operate as small quantity generators (SQGs) as defined in 40 CFR 162.34. However, Target retails pharmaceuticals and over-the-counter (OTC) products that when sent out as a waste may be considered a p-listed waste. These episodic events may exceed 2.2 pounds in a single shipment.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

[Click Here:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource

Tag Number: A8535
Tank Status: Operational
Tank Status Date: 09/28/2002
Tank Install Date: 09/28/2002
Tank Closure Date: Not reported
Capacity Range: 10,000 to 19,999 Gallons
Tank Permit Expiration Date: 11/30/2020
Tank Upgrade Date: Not reported
Tank Spill Prevention: Spill Bucket/Spill Box
Tank Overfill Prevention: Ball Float Valve (vent line)
Tank Material: Fiberglass Reinforced Plastic
Tank Construction: Double Wall Tank
Tank Tightness Test: Not reported
Tank Corrosion Protection: Corrosion Resistant
Tank Manifold: Not reported
Tank Release Detection: Interstitial Monitoring
Tank SFC Type: Not reported
Pipe Material: Flexible Piping
Pipe Construction: Double Wall Pipe
Pipe Primary Release Detection: Automatic Line Leak Detector (ALLD)
Pipe Second Release Detection: Interstitial Monitoring (or Sump Sensor)
Pipe Corrosion Protection: Corrosion Resistant
Pipe Pumping System: Pressurized System
Responsible Unit: Northwest
Dispenser/Pump SFC Type: Not reported

FINDS:

Registry ID: 110005362534

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Status: Operational
Tank Status Date: 08/06/1996
Tank Install Date: 01/01/1987
Tank Closure Date: Not reported
Capacity Range: 10,000 to 19,999 Gallons
Tank Permit Expiration Date: 12/31/2020
Tank Upgrade Date: 04/08/1998
Tank Spill Prevention: Spill Bucket/Spill Box
Tank Overfill Prevention: Automatic Shutoff (fill pipe)
Tank Material: Fiberglass Reinforced Plastic
Tank Construction: Double Wall Tank
Tank Tightness Test: Not reported
Tank Corrosion Protection: Corrosion Resistant
Tank Manifold: Auxiliary
Tank Release Detection: Interstitial Monitoring
Tank SFC Type: Sump
Pipe Material: Fiberglass
Pipe Construction: Double Wall Pipe
Pipe Primary Release Detection: Not reported
Pipe Second Release Detection: Interstitial Monitoring (or Sump Sensor)
Pipe Corrosion Protection: Corrosion Resistant
Pipe Pumping System: Siphon
Responsible Unit: Northwest

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D003
Waste Description:	REACTIVE WASTE
Waste Code:	D012
Waste Description:	ENDRIN (1,2,3,4,10,10-HEXACHLORO-1,7-EPOXY-1,4,4A,5,6,7,8,8A-OCTAHYDRO-1,4-EN DO, ENDO-5,8-DIMETH-ANO-NAPHTHALENE)
Waste Code:	D043
Waste Description:	VINYL CHLORIDE
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING

CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F005

Waste Description:

THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code:

F009

Waste Description:

SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
